

Manual Addendum

iBoot Revision 2.1

Your iBoot has been upgraded to version 2.1

This manual addendum details the improvements from version 2.0. Please refer to the enclosed version 2.0 manual for all other installation and operation details.

The complete Version 2.1 manual is available online:
http://dataprobe.com/support/manuals/pwr/iboot_21.pdf

New to Version 2.1 Pages 8 thru 10, Setting the IP address of iBoot:

For security purposes, setting the IP Address using the `ibootrst.exe` or ARP techniques can only be done during the first two minutes that the iBoot has been powered up. After this time, the IP address can only be set using the web interface.

This change was made to prevent unauthorized changing of the IP address.
