

Muon acceleration to 5 GeV - 'dogbone' RLA

Alex Bogacz

- ⊙ FFAG acceleration below 5 GeV not cost effective
- ⊙ 'dogbone' RLA (3.5-pass) scheme based on 200MHz SRF
 - ⌘ Pre-accelerator (273 MeV/c - 1.5 GeV) based on solenoid focusing
 - ⌘ Main Linac (1 GeV/pass) based on triplet focusing
 - ⌘ Three 'droplet' arcs with horizontal multi-pass separation
- ⊙ Initial beam parameters for Study IIa - after cooling at 273 MeV/c
- ⊙ Lattices - linear optics, tracking studies, emittance preservation

'Dogbone' RLA (3.5-pass) scheme

- Pre-accelerator (273 MeV/c - 1.5 GeV) – solenoid focusing
- Main Linac (1 GeV/pass) – triplet focusing
- Single magnet horizontal multi-pass separation
- 3 Arcs based on the same strength of bending magnets (~ 1 Tesla)

Initial beam emittance/acceptance after cooling at 273 MeV/c

Study IIa		ϵ_{rms}	$A = (2.5)^2 \epsilon$
normalized emittance: ϵ_x/ϵ_y	mm·rad	4.8	30
longitudinal emittance: ϵ_l ($\epsilon_l = \sigma_{\Delta p} \sigma_z / m_\mu c$)	mm	27	150
momentum spread: $\sigma_{\Delta p/p}$		0.07	±0.17
bunch length: σ_z	mm	176	±442

Machine Parameters

Study IIa		
Final energy	GeV	5
Number of bunches per pulse		89
Number of particles per per pulse		$3 \cdot 10^{12}$
Bunch/accelerating frequency	MHz	200/200
Average repetition rate	Hz	15
Average beam power	kW	144

Pre-accelerator - 3 styles of cryo-modules, solenoid focusing

◆ short (3 m)

◆ medium (5 m)

◆ long (8 m)

Blue - SC walls of cavities. Red - solenoid coils. Green - magnetic shielding.

❖ Pre-accelerator – parameters of different style cryo-modules

	Short	Medium	Long
Number of periods	12	18	22
Total length of one period	3 m	5 m	8 m
Number of cavities per period	1	1	2
Number of cells per cavity	1	2	2
Cavity accelerating gradient	15 MV/m	15 MV/m	15 MV/m
Real-estate gradient	3.72 MV/m	4.47 MV/m	5.59 MV/m
Aperture in cavities (2a)	460 mm	460 mm	460 mm
Aperture in solenoids (2a)	460 mm	460 mm	460 mm
Solenoid length	1 m	1 m	1 m
Solenoid maximum field	1.5 T	1.9 T	3.9 T

Total length: 302 m

Total gradient: 2.07 GV

◆ Linear Pre-accelerator - Twiss functions and beam envelope (2.5σ)

❖ Introduction of synchrotron motion in the initial part of the linac

- ◆ allows to perform adiabatic bunching/compression of the beam
- ◆ prevents head-to-tail 'sag' in acceleration
- ◆ reduction of effective accelerating gradient (1.3GV out of 2 GV)

Cavity phase along the linac

Synchrotron phase along the linac

❖ Pre-accelerator (273 MeV/c - 1.5 GeV) - Longitudinal dynamics

energy profile along the linac

longitudinal acceptance, bucket

$$\Delta p/p = \pm 0.17 \text{ or } \Delta \phi = \pm 93 \text{ (200MHz)}$$

❖ Pre-accelerator (273 MeV/c - 1.5 GeV) - Longitudinal acceptance

Phase space contours **before**, **half-way through** and **at the end** of acceleration - contours defined for particles at 2.5σ (95% of particles contained inside)

Linear Pre-accelerator - Longitudinal dynamics, particle tracking

Fri Dec 03 09:03:52 2004 OptiM - MAIN: - D:\Study 2A\PreLinac\Linac_sol.opt

❖ Linear Pre-accelerator - transverse emittance (tracking)

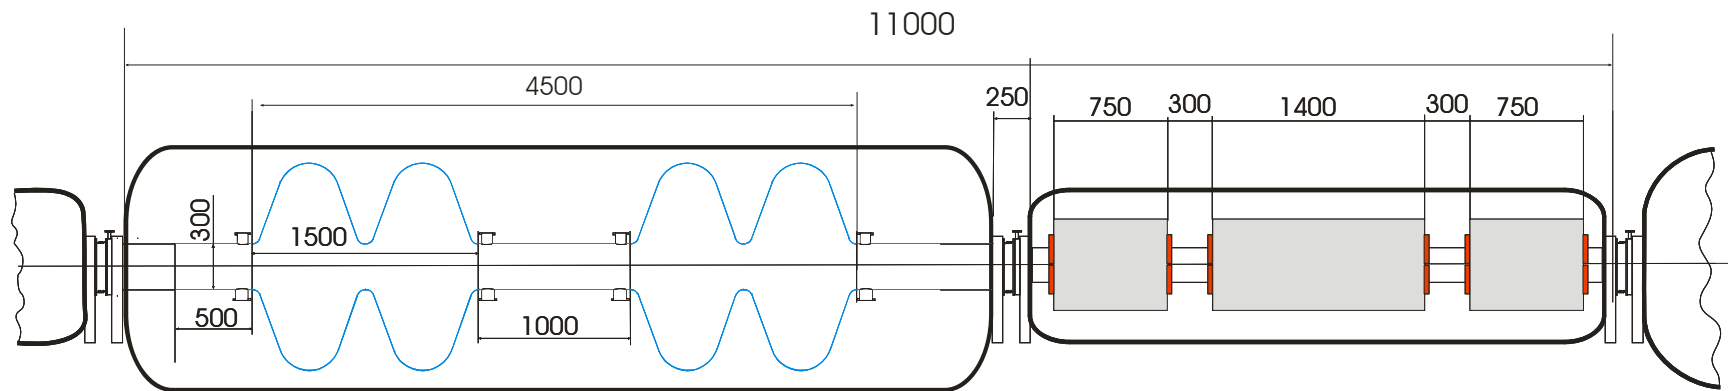

Tue Feb 15 10:29:00 2005 OptiM - MAIN: - D:\Study 2\PreLinac\Linac_sol.opt

Tue Feb 15 10:30:19 2005 OptiM - MAIN: - D:\Study 2\PreLinac\Linac_sol.opt

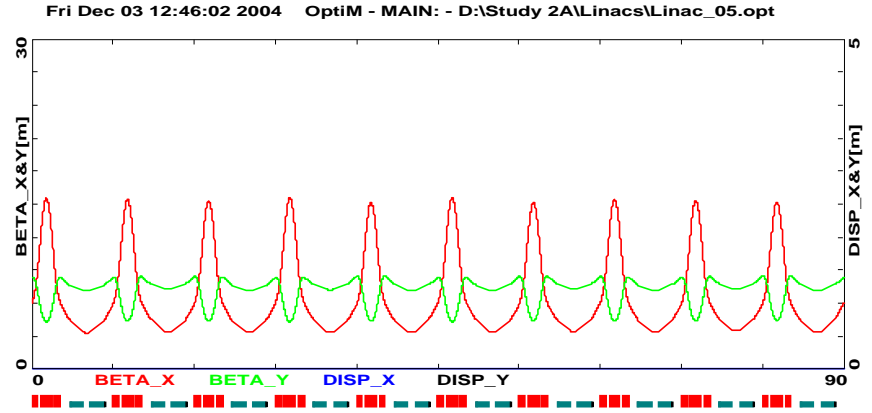

Main linac cell - long cryo-module & triplet

◆ Main Linac – multi-pass Optics (lower passes)

1.5-2 GeV

2-3 GeV

◆ Main Linac – multi-pass Optics (higher passes)

◆ Main Linac – the half-pass (1.5-2 GeV) longitudinal tracking

Fri Dec 03 13:11:43 2004 OptiM - MAIN: - D:\Study 2A\Linacs\Linac_05.opt

◆ Main Linac – the half-pass (1.5-2 GeV) transverse emittance tracking

Tue Feb 15 10:07:08 2005 OptiM - MAIN: - D:\Study 2A\Linacs\Linac_05.opt

Arc Optics – beam transport choices

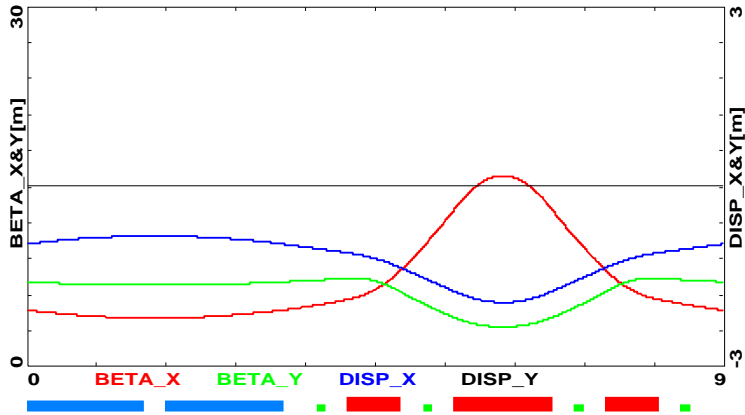

- ❖ Principle of uniform focusing periodicity (90°) - cancellation of chromatic effects
- ❖ Single dipole (horizontal) separation of multi-pass beams in RLA
 - ◆ No need to maintain achromatic Spreaders/Recombiners
 - ◆ Compact Spreaders/Recombiners - minimized emittance dilution
- ❖ SC dipoles and quads (triplets) in RLA (1 Tesla dipoles/1 Tesla quads)
- ❖ Requirement of high periodicity and 'smooth' transition between different kinds of optics, linac-spreader-arc-recombiner-linac

❖ 'Droplet' return arc footprint (60° out – 300° in – 60° out)

❖ 'droplet' arc - building blocks (inward and outward cells, missing dipoles)

Fri Dec 03 13:23:10 2004 OptiM - MAIN: - D:\Study 2A\ Droplette\A_

Fri Dec 03 13:24:34 2004 OptiM - MAIN: - D:\Study 2A\ Droplette\A_

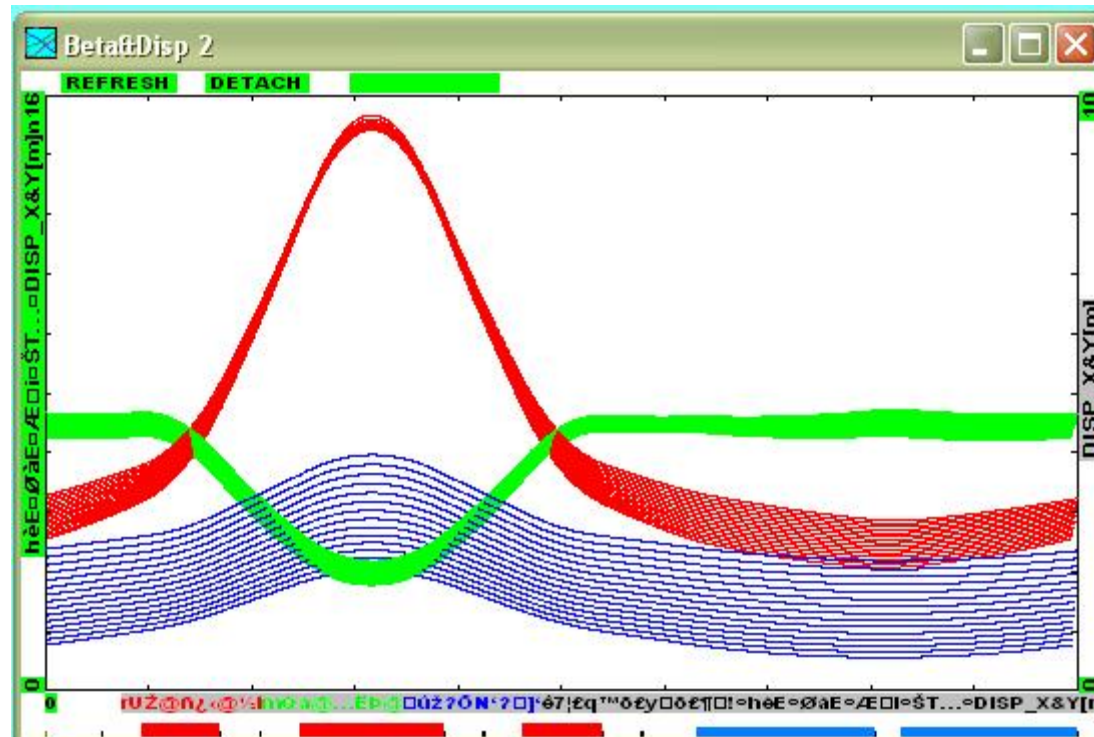

Fri Dec 03 13:27:09 2004 OptiM - MAIN: - D:\Study 2A\ Droplette\L_out.opt

Fri Dec 03 13:33:34 2004 OptiM - MAIN: - D:\Study 2A\ Droplette\SprTr.opt

❖ Chromatic properties of the periodic cell ($\Delta p/p = \pm 0.07$)

❖ 'droplet' return arc footprint (60° out – 300° in – 60° out)

◆ 'droplet' return half-Arc 1(Spreader and Transition)

Fri Dec 03 13:40:25 2004 OptiM - MAIN: - D:\Study 2A\Droplette\halfArc.opt

Dipoles:

L[cm]	B[kG]
150	7.8

Quads:

	L[cm]	G[kG/cm]
D	68	-0.32
F	125	0.32

◆ 'droplet' return Arc 1 - longitudinal tracking

Tue Feb 15 09:19:26 2005 OptiM - MAIN: - D:\Study 2A\Droplette\Arc.opt

❖ 'droplet' return Arc 1 - transverse emittance (tracking)

Tue Feb 15 10:54:52 2005 OptiM - MAIN: - D:\Study 2A\Droplette\Arc.opt

◆ 'Droplet' return Arc 2 (matched to the linac)

Fri Dec 03 13:54:04 2004 OptiM - MAIN: - D:\Study 2\Arcs\Arc.opt

Summary

- ⊙ Lattice for 3.5-pass, 5 GeV, RLA based on 200MHz SRF – linear optics
 - ⌘ Pre-accelerator, three styles of cryo-modules
 - ⌘ Proof-of-principle Arc optics lattice – further longitudinal compression in the Arcs, with $M_{56} \sim 3$ m
 - ⌘ multi-pass linac optics
 - ⌘ compact Spr/Rec - 'smooth' transition of optics between linacs and Arcs
- ⊙ Still to be demonstrated... Emittance preservation scheme – nonlinear corrections in the Arcs
 - ⌘ Chromatic corrections in the Arcs to effectively restore longitudinal space linearity (via three families of sextupoles)
 - ⌘ Emittance preservation checked independently by ICOOL
