

# **Acceleration Status**

J. Scott Berg  
Brookhaven National Laboratory  
ISS Machine Working Group Meeting  
26 July 2006

# FFAGs

- Non-scaling FFAGs

- ◆ We are in the process of studying cures for the time-of-flight dependence on transverse amplitude
- ◆ Shinji has made a first pass at an error analysis
- ◆ The EMMA proposal has made it to the second round, and funding is looking promising

- Scaling FFAGs

- ◆ Judging from the NuFact agenda, there is some interesting work going on here

# RLAs

- Working in squeezing more turns out of them
  - ◆ Using a FODO lattice instead of a triplet may help?
- Thinking about taking to higher energy, maybe two stages
- Some error analysis done
- Still need chromatically corrected lattices
